Office Action Summary								

Serial Number: 09/986758

Art Unit: 3753

This action is responsive to the communication filed November 9, 2001.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-14 and 16-22 are rejected under 35 U.S.C. §102(b) as being anticipated by Bell. Bell shows a distribution manifold 1 having an inlet 1a at the bottom wall, which appears from the drawings to be cylindrical, and a plurality of outlets 3a which extend into the manifold 1 as shown in Figure 2. The inner ends of cylindrical outlets 3a have radii of half their diameter. The four outlets shown are read as two banks of two.

The recitation in claim 1 of "for an air mass flow controller for fuel cells" merely relates to intended use and is given no weight. The recitation in claim 12 of "airflow" merely relates to intended use and is given no weight. As to claim 12, at sufficiently low flow rates the manifold of Bell will inherently provide laminar flow.

Claims 4 and 15 rejected under 35 U.S.C. §102(b) as being anticipated by Kaminaka et al. Kaminaka et al show a fluid distributor 10 having an inlet 1 and outlets 3, the six outlets

Serial Number: 09/986758

Art Unit: 3753

disclosed being read as two banks of three. The inlet and outlets are on opposite walls.

The recitation in claim 1 of "for an air mass flow controller for fuel cells" merely relates to intended use and is given no weight. The recitation in claim 12 of "airflow" merely relates to intended use and is given no weight. As to claim 12, at sufficiently low flow rates the manifold of Kaminaka et al will inherently provide laminar flow.

The Prior Art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited show other manifolds, or diffusers.

Any inquiry concerning this communication should be directed to Examiner Fox at (703) 308-2595 or John.Fox@uspto.gov. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0861. The fax number for Art Unit 3753 is (703) 308-7765. The Supervisory Primary Examiner for Art Unit 3753 is Michael Buiz who can be reached at (703) 308-2580 or at Michael.Buiz@uspto.gov.
